

NESTJS BACKEND TO MONGODB

NESTJS :

- Nestjs is a framework for the nodejs
- We use typescript to write codes in the nestjs because it is more efficient and good performance.

CONFIGURATION METHOD:

- While connecting the mongodb to the backend i used the forRoot() method to load the .env files
- configModule which is from the package and it is used to read the .env files
- configMongoose is also from the package and it is used to connect the backend to the mongodb

```
.env app.module.ts U x app.service.ts U app.controller.ts U BLACKBOX
1 import { Module } from '@nestjs/common';
2 import { AppController } from './app.controller';
3 import { AppService } from './app.service';
4 import { ConfigModule } from '@nestjs/config';
5 import { MongooseModule } from '@nestjs/mongoose';
6 import { connection } from 'mongoose';
7 import { CONNREFUSED } from 'dns';
8
9 @Module({
10   imports: [
11     ConfigModule.forRoot({ isGlobal: true}),
12     MongooseModule.forRoot(process.env.MONGO_URL!)
13   ],
14   controllers: [AppController],
15   providers:[AppService]
16 })
17 export class AppModule {}
18
```
